

Market-Specific Solutions

Franklin Energy's market-specific solutions deliver tailored efficiency and electrification programs designed around the unique needs of mission-critical industries.

Market-Specific Solutions

Franklin Energy's market-specific solutions deliver tailored efficiency and electrification programs designed around the unique needs of mission-critical industries.

Our market-specific programs help utilities and governments meet ambitious decarbonization goals while supporting the reliability and cost-control priorities of their largest customers. We combine deep technical expertise with sector-specific strategies to deliver measurable savings and emissions reductions.

▶ Vertical-Aligned Measure Packages

We customize each solution with market-informed audits and targeted measures. Whether it's variable frequency drives for wastewater facilities, advanced lighting and controls for indoor agriculture, or process cooling upgrades for industrial refrigeration, our strategies address the technologies and systems that matter most in each industry.

▶ Strategic Electrification Roadmapping

We help clients plan for fuel switching in core energy uses such as space and water heating, industrial process heat, and mobile equipment. Our approach balances cost, emissions reductions, and infrastructure readiness, enabling organizations to confidently transition toward a cleaner energy future.

▶ Portfolio-Level Customization

We offer flexible pathways for whole-building or multi-site programs, allowing phased implementation that aligns with capital planning cycles and organizational priorities. By engaging stakeholders across facilities and leadership, we build buy-in and ensure solutions are both practical and scalable.

KEY BENEFITS

Market-Optimized Design

Deliver programs tailored to each industry's operational realities, regulatory drivers, and major energy uses.

Measurable Energy and Carbon Reductions

Achieve portfolio-level impact with targeted measures, electrification strategies, and operational improvements.

Client and Customer Confidence

Build trust with technical rigor, proven delivery, and a human-centered approach that engages engineers, managers, and sponsors.

WORKS WELL WITH

Audit & Assessment

Identify savings opportunities and establish a solid technical foundation through comprehensive facility audits.

Consulting: Energy Project Roadmap

Turn audit findings into multi-year improvement strategies that align with financial, resilience, and sustainability goals.

Design/Build:

Distributed Energy Resources

Bundle efficiency upgrades with solar, storage, and EV charging to maximize savings, reliability, and carbon impact.
